

DISPATCH MANAGER

Dispatch Manager Guide

How to keep the dispatch floor accurate in SRM Tools.

What you maintain

Six things you do above the dispatchers. Settings, monitoring, audit — your job is to keep the dispatch system honest while the dispatchers run the day.

01 Tune per-region operational settings

Operations → Settings.

02 Monitor the Call List team

Operations → Call List → Team Monitor.

03 Audit Help & Cross-Loading

Operations → Statistics → Help & Cross-Loading.

04 Review service quality across the region

Operations → Statistics → Service.

05 Spot-check the daily plan

Operations → Planner / Schedule.

06 Watch the customer service tier

Operations → Statistics → Service Lookup.

Cadence

Daily	Spot-check the Planner and Schedule before first load-out. Glance at the Call List Team Monitor.
Weekly	Audit Help & Cross-Loading and Service quality. Review settings overrides per region.
As needed	Tune operational settings when fleet math drifts. Run service lookups when customers escalate.

01

Tune per-region operational settings

Operations → Settings is the only place `plan.settings` permission opens — the 16 dispatcher-tunable knobs that drive every pool / schedule / pull-up calculation. Change one and every dispatcher's math updates immediately.

Where: Operations → Settings.

1. Open Operations → Settings.
2. Four sections: Truck Cycle Times, DOT Compliance, Service Quality Thresholds, Schedule.
3. Edit a field. Inline validation mirrors the DB constraints — saving is blocked when a value would break cycle math.
4. Save. Every dispatcher in this region sees the new values within the next save window. The per-row "Custom" pill marks anything off the default.
5. Reset-to-defaults wipes overrides for the whole region — confirm before clicking.

Operational Settings · NMS region

16 dispatcher-tunable knobs · saved values take effect immediately

TRUCK CYCLE TIMES

Pre-trip inspection	15	minutes	☐
Default 15 · ACI 211 typical			
Plant load	10	minutes	☐
Default 10 · ACI 211 typical			
Slump / QC test	5	minutes	☐
Default 5 · ACI 211 typical			
On-site per truck	30	minutes	☐
Default 30 · ACI 211 typical			

02 Monitor the Call List team

Operations → Call List → Team Monitor is a management overview of who's making calls and what's landing. Booking rate is the leading indicator: total calls measures effort, bookings measure impact.

Where: Operations → Call List → Team Monitor.

1. Open Operations → Call List. Switch to Team Monitor.
2. Pick a time frame: Today / This week / 30 days / 90 days / Year / All.
3. Each caller card shows total calls, outcome mix, booked count, will-book count, unique customers reached.
4. Stale callers (≥14 days since last call) show a red Last-call tag — follow up with them.

03

Audit Help & Cross-Loading

Statistics → Help & Cross-Loading shows which plants are giving help to others and which are receiving — both planned (deadhead) and actual (cross-loaded). Imbalances here surface dispatch decisions that consistently favor one plant over another.

Where: Operations → Statistics → Help & Cross-Loading.

1. Open Operations → Statistics → Help & Cross-Loading.
2. Headline KPI: operators planned to help, yardage actually loaded for other plants, distinct plants giving / receiving.
3. The breakdown table shows per-plant give-vs-receive plus a help score.
4. Pull-down chart shows volume; the per-plant rows show the actual route splits.

Operations · Planner

Today · 22 May 2026 · 4 plants in scope

407 Conroe		3 orders	
06:00	ACME Construction	40 yd ³	4 TRUCKS
07:30	Riverside Plaza	24 yd ³	3 TRUCKS
09:15	Northwood Apartments	80 yd ³	8 TRUCKS
408 Houston		2 orders	
06:30	Bayou Bridges Project	120 yd ³	12 TRUCKS
10:45	Eastside Office Tower	36 yd ³	4 TRUCKS

04

Review service quality across the region

Statistics → Service tracks late starts, slow pours, and overall service classification for every measured order. Patterns here predict customer churn before the Call List reflects it.

Where: Operations → Statistics → Service.

1. Open Operations → Statistics → Service.
2. Outcome distribution shows the Good / Late only / Slow only / Late + slow split.
3. Per-plant scorecard ranks plants by Good % — anything under 85% is amber, under 70% is red.
4. Per-hour scorecard: which time-of-day bands consistently slip.
5. Worst-orders list: the 20 bad-service orders in the window — drill in for ticket detail.

Operations · Planner

Today · 22 May 2026 · 4 plants in scope

407 Conroe		3 orders	
06:00	ACME Construction	40 yd ³	4 TRUCKS
07:30	Riverside Plaza	24 yd ³	3 TRUCKS
09:15	Northwood Apartments	80 yd ³	8 TRUCKS
408 Houston		2 orders	
06:30	Bayou Bridges Project	120 yd ³	12 TRUCKS
10:45	Eastside Office Tower	36 yd ³	4 TRUCKS

05 Spot-check the daily plan

Even though the dispatcher owns the day's plan, you're the second pair of eyes. Open the Planner and Schedule each morning, look for obvious mis-staffing or coverage holes.

Where: Operations → Planner / Schedule.

1. Open Operations from Tools.
2. Planner tab: scan for plants under-staffed for their booked yardage. Look for negative pool-after-dispatch numbers.
3. Schedule tab: scan for orders with no truck count, missing addresses, or sentinel times.
4. If you see red, call the dispatcher first — don't edit directly under them unless you tell them.

Operations · Planner			
Today · 22 May 2026 · 4 plants in scope			
407 Conroe		3 orders	
06:00	ACME Construction	40 yd ³	4 TRUCKS
07:30	Riverside Plaza	24 yd ³	3 TRUCKS
09:15	Northwood Apartments	80 yd ³	8 TRUCKS
408 Houston		2 orders	
06:30	Bayou Bridges Project	120 yd ³	12 TRUCKS
10:45	Eastside Office Tower	36 yd ³	4 TRUCKS

06

Watch the customer service tier

Statistics → Service Lookup lets you search any customer and see every job they had — scheduled time, plant, late / slow / good verdict, kicker yardage, same-day flag. Use it when a customer escalates a complaint.

Where: Operations → Statistics → Service Lookup.

1. Open Operations → Statistics → Service Lookup.
2. Search by customer name or number.
3. The detail panel shows every measured order with date, plant, verdict, late-by, pace, and kicker.
4. Same-day orders (15:00 sentinel start) are flagged with an amber chip — useful when triaging short-notice complaints.

Quick reference

Where things live in the navigation.

TOOLS	Operations	Planner, Schedule, Statistics, Call List, Settings
TOOLS	Operations → Settings	Per-region operational knobs (plan.settings permission)
REPORTING	List	Track recurring dispatch issues across the floor
PEOPLE	Managers	Your dispatchers

If the app doesn't match this guide

Settings page is read-only → you're missing the plan.settings permission. Talk to your General Manager.

A region's settings look wrong but you didn't change them → the row may not exist yet; the page falls back to baked-in defaults until you save the first override.

A dispatcher's metrics look low → use Team Monitor's time-frame selector to compare across windows before concluding.
