

DISPATCHER

Dispatcher Guide

How to run the day from SRM Tools.

What you maintain

Six things you own through the dispatch day. The Planner is your home base; everything else either feeds it or follows from it.

- 01 Build the daily plan**
Operations → Planner.
- 02 Send the daily plan email**
Operations → Plan header → Review & Send.
- 03 Work the Call List**
Operations → Call List → Outreach.
- 04 Watch the Schedule during the day**
Operations → Schedule.
- 05 Maintain inter-plant travel times**
Operations → Settings → Travel times between plants.
- 06 Reconcile unmatched drivers**
Operations → Statistics → Operators.

Cadence

Pre-dawn	Build the day's plan in Planner. Review & Send the per-plant emails before first load-out.
Through the day	Watch the Schedule. Work the Call List in dead time. Act on red badges as they appear.
As needed	Update travel times. Reconcile unmatched drivers when the bucket grows.

01

Build the daily plan

Operations → Planner is where the day's pours get scheduled — plant by plant, hour by hour. Realtime collaborative, so other dispatchers see your edits in under a second.

Where: Operations → Planner.

1. Open Operations from the Tools menu. The Planner tab loads with today's plan.
2. For each plant, add routes — fromPlant, toPlant, time, driver count, return plant.
3. The Schedule tab fills in automatically as you add orders. Watch the pool-after-dispatch numbers — negative means overbooked.
4. Save is automatic (autosave fires 250ms after the last edit).
5. Need help from another plant? Use the help-assignment row to route drivers across plants.

02 Send the daily plan email

Every plant gets one email — to its Plant Manager, CC to the District Manager. Once the plan is set, the Review & Send modal previews each email before it goes out.

Where: Operations → Plan header → Review & Send.

1. Once the plan is solid, click Review & Send on the Plan header.
2. The modal lists every plant in scope with the intended TO (Plant Manager) and CC (District Manager).
3. Skim each email's contents. If a plant's plan looks wrong, close, fix the Planner, come back.
4. Hit Send. One email per plant, queued through the daily-plan-email edge function.

03

Work the Call List

Operations → Call List is your customer outreach queue. Customers sorted by dormancy — longest dormant at the top. Log every call so the team doesn't double-dial.

Where: Operations → Call List → Outreach.

1. Open Call List. Outreach is the default tab.
2. Click into a customer card. A presence banner shows if anyone else is on the same customer right now — don't double-call.
3. Make the call. Log the outcome: Booked / Will Book Again / No Answer / Not Interested / Note.
4. Add a comment with anything relevant — project timeline, gatekeeper, follow-up date.
5. Switch to the Activity tab to see what the rest of the team has logged today.

Call List · Outreach

247 customers in your queue · sorted by longest dormant

Open

04

Watch the Schedule during the day

Operations → Schedule shows every order with live status badges — late starts, slow pours, hours-limit warnings. Act on red as it appears, not at end of day.

Where: Operations → Schedule.

1. Open Operations → Schedule. The list refreshes as dispatch tickets land.
2. Red badges: Late (first truck late), Slow (pour pace under target), LIMIT (driver shift over 14h).
3. Click into an order to see the Truck Coverage and Tickets panels.
4. Pull-up suggestions: if a job could move earlier, the planner shows a Move Up chip with the savings.

05

Maintain inter-plant travel times

Travel times feed every help-routing decision the planner makes. Stale travel times under-staff cross-plant runs and over-state operator clock-ins. Update when a plant moves or a major road project changes the drive.

Where: Operations → Settings → Travel times between plants.

1. Open Operations → Settings. The travel-time matrix is the only thing on that tab.
2. Add a new route: pick a From plant and a To plant, type the minutes, click Add.
3. Existing routes show in the Saved Routes list. Click the trash icon to remove.
4. Always enter the live-traffic average, not the empty-road minimum.

Operational Settings · NMS region

06 Reconcile unmatched drivers

Tickets carry driver names. If a ticket's name doesn't resolve to an operator record in Tools, the load lands in the Unmatched bucket — invisible to the per-operator stats. Fix the spelling so the load attributes correctly.

Where: Operations → Statistics → Operators.

1. Open Operations → Statistics → Operators Loads.
2. Scroll to the Unmatched operators row at the bottom of the table.
3. Each unique name appears once with its load count, yardage, trucks, and loading plants.
4. Click Copy list to export a tab-separated report. Send to People → Operators or the Plant Manager.
5. Fix the spelling on either the Tools operator record or in Jonel.

Quick reference

Where things live in the navigation.

TOOLS	Operations	Planner, Schedule, Statistics, Call List, Settings
REPORTING	List	Task list — log anything that needs follow-up
ASSETS	Mixers	Mixer status — confirms what's actually running
PEOPLE	Operators	Cross-reference when reconciling unmatched drivers

If the app doesn't match this guide

Operations is read-only → you're missing plan.edit. Talk to your Dispatch Manager.

An email failed to send → the daily-plan-email edge function logs the error; ask engineering.

A presence banner says someone else is on a customer → coordinate before dialling so you don't both call.
